Education

University of Engineering and Technology Peshawar, Pakistan

Bachelor Studies in Computer Science Sep. 2018 – Sep. 2022

Thesis: HTML Code Generation from Images with Deep Neural Networks
Advisor: Dr. Zakira Inayat
CGPA: 3.58/4.0

Professional Experience

AI Researcher Sep. 2024 – Present

VOLV AI

- Directing the AI research in 3D computer vision and deep learning, delivering a virtual try-on SDK for garments and makeup adopted by a few fashion brands to boost user engagement by 40% using neural rendering, GANs, and diffusion models (Demo).
- Leading the development of digital human avatars with higher pose estimation accuracy (OpenPose, AlphaPose), enabling personalized customer interactions and reducing product return rates by 30%.

Research AI Engineer Jan. 2023 – Dec. 2023

BHuman AI

- Led the development of personalized Generative AI for 1–to–infinity conversational videos.
- Developed advanced audio-driven lip-sync models, the company's flagship product and revenue source.
- Researched and implemented state-of-the-art models in image animation, facial motion transfer, and face-swapping.

Undergraduate Research Assistant Jan. 2022 – Oct. 2022

Advisor: Dr. Zakira Inayat CS&IT AI Lab UET Peshawar

- Developed supervised neural network solutions for image processing and implemented generative models for automated image captioning tasks.
- Contributed to literature reviews and code writing in research projects on contextual intelligence and image similarity.
- Implemented mathematical optimization techniques like SVD, LU Decomposition, and Cross-Entropy Minimization.

Intern Machine Learning Engineer Aug. 2021 – Nov. 2021

[*web link*] NAECO Blue GmbH

- Developed analytical functions and machine learning models for selecting optimal spatial and temporal resolution of weather data for solar and wind energy predictions and insights.
- Conducted research and evaluated weather models and their APIs to support the company's data needs. This led to the implementation of a data pipeline that reduced research and development time by nearly 50%.

Research Projects

OmniFit-3D: A Unified Framework for 3D Virtual Try-On with Pose-Adaptive Realism

Jan. 2025 – Present

- Designed a unified framework for 3D virtual try-on that achieves pose-adaptive realism with minimal input requirements and faster execution.
- Integrated 2D image-based virtual try-on with 3D depth estimation to reconstruct 3D try-on meshes, enabling users to visualize clothing fit from multiple perspectives.

LipSyncFace: High-Fidelity Audio-Driven and Lip-Synchronized Talking Face Generation

Advisor: Dr. Zakira Inayat June 2024 – Jan. 2025

- Developed a two-stage framework for audio-driven talking face generation, addressing the challenge of visual quality and creating a unified training pipeline in lip synchronization.
- Proposed a face generation network to encode visual face information and synchronize lip movements with audio.
- Implemented a rendering decoder to render high-fidelity videos more precisely in lip-sync with faster inference time.

lipsync2: Talking Face Generation with Most Accurate Lip Synchronization Aug. 2023 – Dec. 2023

- Developed a GAN framework for audio-driven lip synchronization, which generates talking faces.
- Implemented a pre-trained discriminator that evaluates the generated faces for whether audio signals and lips are in sync.
- Achieved 10% improvements on Lip-Sync Error Confidence (LSE-C) and 6% improvements on Lip-Sync Error Distance (LSE-D).

face2face: One–Shot Talking Head Video Generation from a Source Image Jan. 2023 – Apr. 2023

- Developed a refinement-based motion transfer method to generate realistic, dynamic talking head videos from a single image, driven by input videos.
- Worked on a pre-trained unsupervised motion synthesis module to estimate hidden motion using flexible grids, addressing the challenge of pose gaps between source and target images.
- Achieved superior performance on benchmarks, exhibiting improvements of $5 - 10\%$ on animation metrics compared to existing approaches.

face–swapping: Swapping Faces in a Video from a Source Image May. 2023 – Aug. 2023

- Developed an image reenactment and image manipulation framework capable of generating realistic face swapped videos from a single image.
- Proposed an identity injection module for transferring the identity information of the source face into the target face at the feature level.

Publications

Skills

- **Programming Languages**: Python, C++, MATLAB, MySQL, LaTeX, Bash Scripting
- **Frameworks/Packages**: PyTorch, TensorFlow, Keras, NumPy, OpenCV, Scikit–Learn
- **Developer Tools**: Git, WandB Monitoring Dashboards, GCP, AWS (*Model Training*)

Awards & Honors

- **Young Undergrad Researcher Award** for Bachelor Thesis in Computer Science (2022)
- **Ranked** 2^{nd}, BS Computer Science; Batch 18^{th} University of Engineering & Technology (2022)
- **Ranked** 2^{nd}, Intermediate Computer Science, Government College Peshawar Batch 2016^{th} (2018)

Extra-Curricular Activities

- **Head of the Technical Team at Google Developer Student Club** (2020-22)
  - ⋆ Arranged meetups, technical talks, and delivered presentations on the impact of AI in education and healthcare at different student societies and clubs.
- **Member of the Microsoft Student Learn Ambassador Society** (2021-22)
  - ⋆ Organized events and facilitated the Microsoft Imagine Cup at my university, creating an inclusive platform for students to showcase innovations and access global opportunities.
- **Language Ambassador for Pashto at Cohere For AI's AYA Project** (2023)
  - ⋆ Promoted linguistic diversity and digital inclusion by engaging Pashto speakers in LLM development through question-answering and prompt creation.
